

Super GP Library v0.0.0

-Configuration

Declaration:

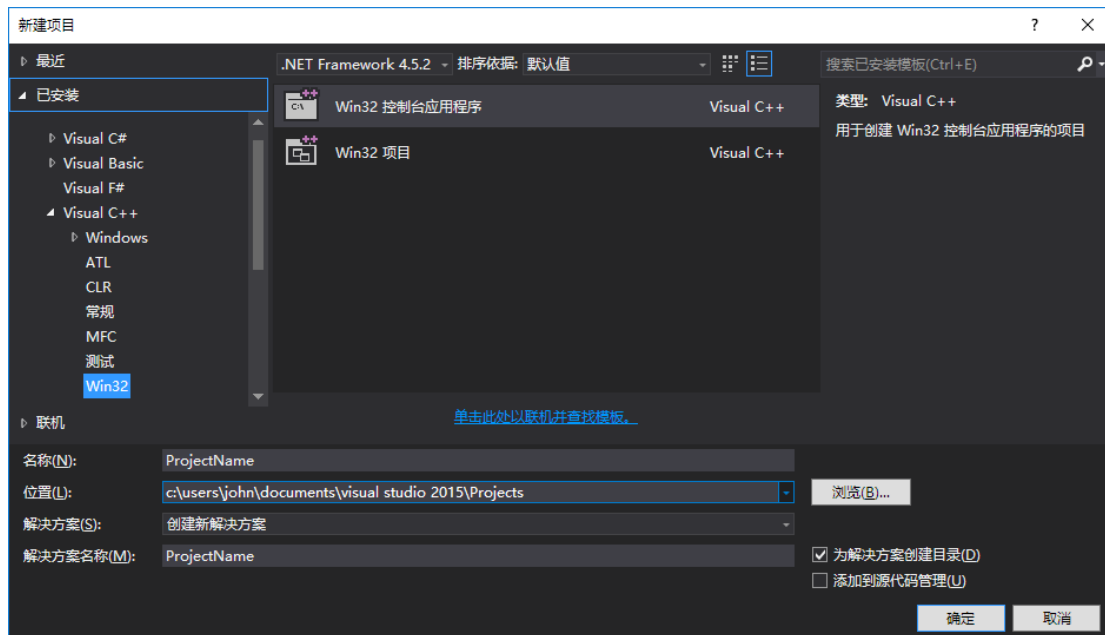

v0.0.0 is the first version of SGL. There're many bugs in it. If users find any of them, try to contact the author with the information in the console. To be friendly to newcomers, the library is coded in C. The C++ library will come out soon.

1. Download

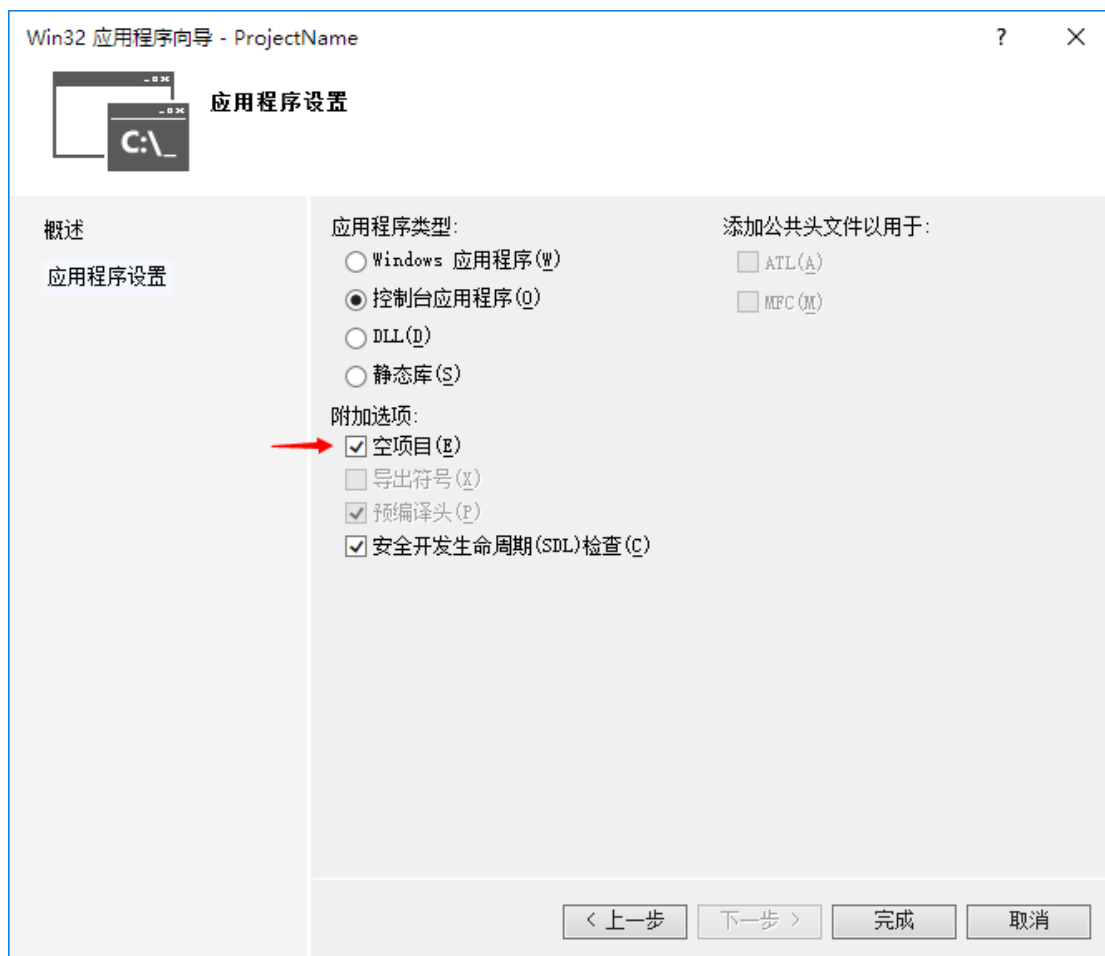

The library rar can be acquired from QQ group, CSDN and github. Unzip the rar and put the files in your favorite folder.

2. Create

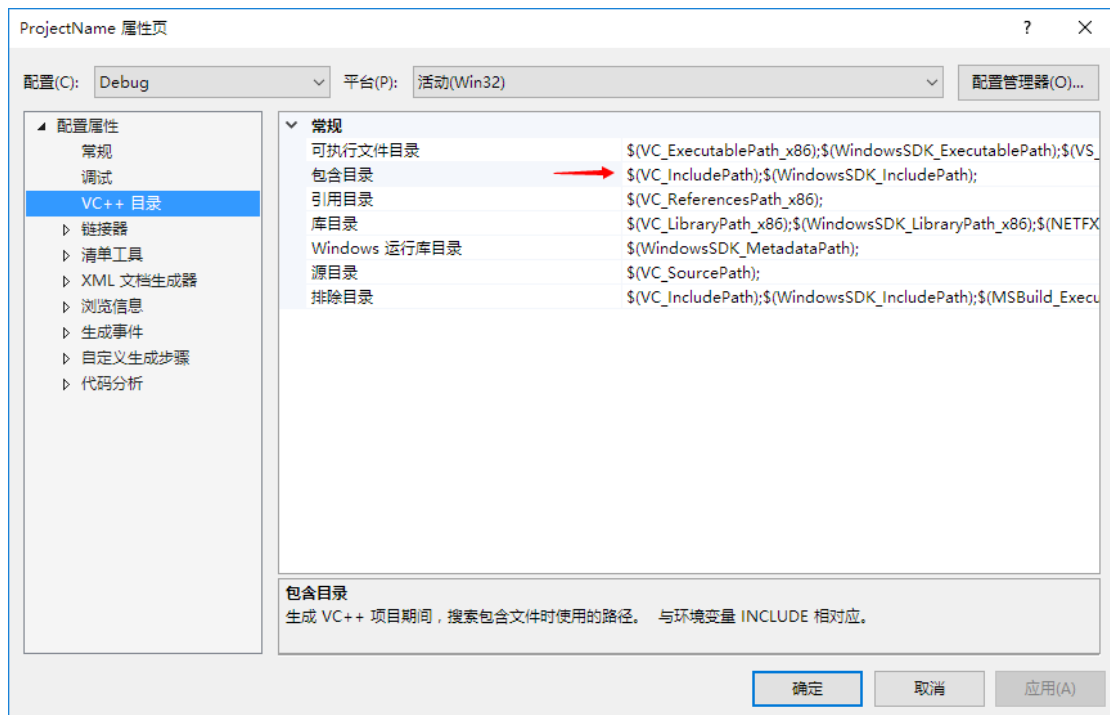

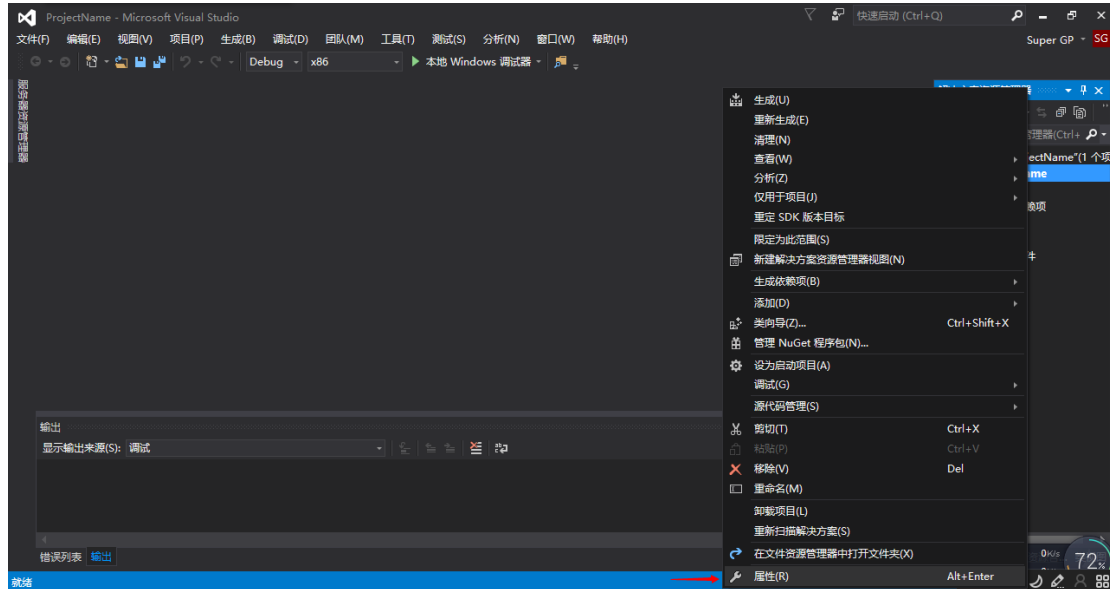

Open VS and create a new project. It doesn't matter which version your VS is.

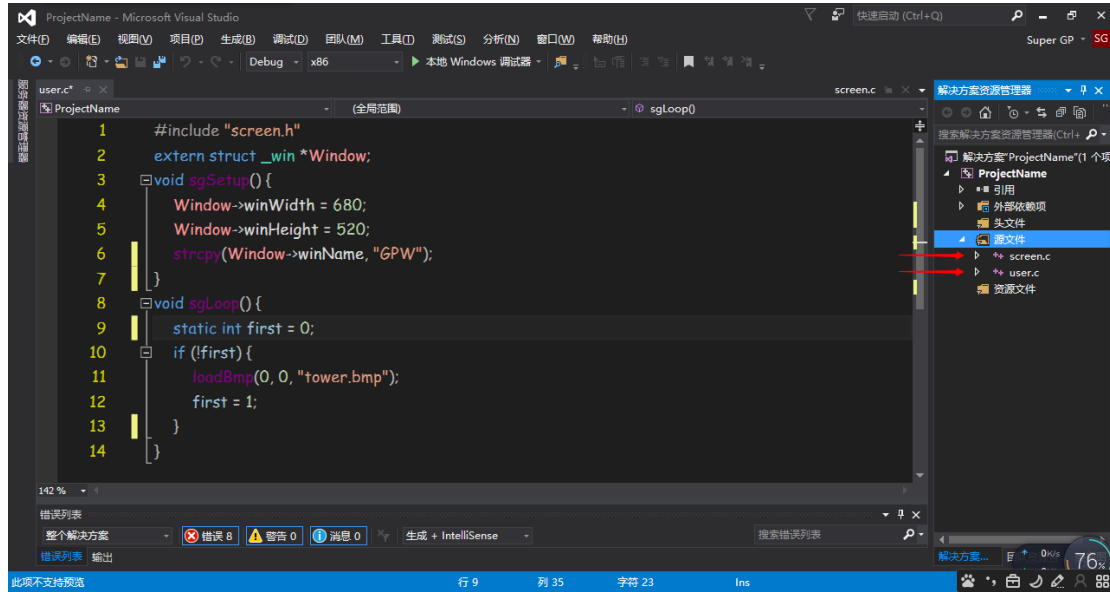

Then choose to create an empty project.

Then open attribute window.

Add your folder which includes screen.h and freeglut.h. If more than one paths need to be added, separate them with semicolon.

Here we finish the configuration. Just compile it and run, and we can enjoy our coding life.
